URBAN SEARCH AND RESCUE SUIT

Focus on physical protection (cur, tear and abrasion resistant), flame and heat resistance, breathability, liquid and viral penetration.

Limited thermal insulation for use in long-term operations where high levels of comfort and functionality are required.

Designed specifically with paramedics in mind.

Lightweight, three-layered Search and Rescue Suits comprise an outer material in various options, a vapour barrier and lightweight Nomex lining. The result is a much lighter and cooler suit that provides adequate protection, allows free movement and lets the rescuer get on with the job.
